# A Novel Approach for Broken Character Recognition on Vehicle License Plates Using SVMS

P. Radhika<sup>1</sup>, P. Praneel Kumar<sup>2</sup>

Asst. Professor, Dept. of CSE, Geethanjali Institute of Science and Technology, Nellore, India<sup>1</sup>

Asst. Professor, Dept. of CSE, Srinivasa Ramanujan Institute of Technology, Anantapur, Andhra Pradesh, India<sup>2</sup>

**ABSTRACT:** Identification of characters on the license plate involves the extraction of information in the vehicle license plate from an image or a sequence of images. The information that is extracted can be used with or without a database in many applications, such as electronic payment systems like toll payment, parking fee payment, freeway and arterial monitoring systems for surveillance of traffic. Image can be captured by camera. The quality of the acquired images is a major factor in the success of acquiring or identifying the characters. Recognizing the degraded characters is a challenging problem. The reasons for character degradation are noise scanning and intrinsic degradation that is caused due to font variations. Degraded characters are found mostly in the form of characters broken at several places which hampers the recognition by OCR systems. Many OCRs have been designed which are used to recognize the characters provided there are no disturbances. However, the recognition of degraded characters is high in its complexity where we find less research work reports in this area. Feature Extraction is probably a very important factor to recognize a broken character. In this paper, feature extraction method called Template Matching is used to recognize broken characters. The method is based on the features of an individual character. The procedure has been applied on the broken characters using Support Vector Machine with successful results.

**KEY WORDS:** Degrading Characters, Optical Character Recognition, Feature Extraction, Support Vector Machine.

## I. INTRODUCTION

Character recognition is always a cumbersome at places where electronic payment system is implemented especially, where the characters are not visible clearly or some portion of the characters is missing. So many methods have been implemented to recognize certain broken characters on license plates. This involve the extraction of information on the license plate from an image [1]. The information that is extracted can be used with or without a database in many applications, such as electronic payment systems like toll payment, parking fee payment, freeway and arterial monitoring systems for surveillance of traffic [7].
