

# GEETHANJALI INSTITUTE OF SCIENCE & TECHNOLOGY: NELLORE (AUTONOMOUS)

NELLORE-524317 (A.P) INDIA

B.TECH IN MECHANICAL ENGINEERING (ACCREDITATED BY NBA) COURSE STRUCTURE AND SYLLABI UNDER RG 22 REGULATIONS

#### **DEPARTMENT VISION**

To evolve as a prospective learning centre producing competent Mechanical Engineers to fulfil the ever changing needs of society and industry demands

#### **DEPARTMENT MISSION**

- **DM1:** To Impart comprehensive knowledge and experience in Mechanical Engineering domain through the effective implementation of Teaching-Learning methodologies
- **DM<sub>2</sub>:** To promote the culture of Interdisciplinary learning and facilitate Industrial training to resolve global Engineering issues
- **DM<sub>3</sub>:** To Impart training on modern drafting and analysis software sharpening computational capabilities and promoting higher studies
- **DM4:** To Initiate Industry-Institute Interface facilitating skill enhancement keeping pace with emerging industrial trends
- **DM**<sub>5</sub> To Infuse moral and ethical values to groom environmentally conscious and socially responsible technocrats with professional integrity.

#### **Program Educational Objectives (PEOs)**

- **PEO1:** Examine and Analyze Mechanical Engineering problems and provide sustainable solutions.
- PEO2: Pursue successful professional career in industry, academia or research.
- **PEO3:** Engage in continuous learning to keep abreast of emerging technologies with a sense of professional commitment and ethics.
- **PEO4:** Contribute in multi-disciplinary teams through effective inter personal skills.

#### **Program Outcomes**

- **PO1** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2 Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3 Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5** Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **PO6** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **PO8** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11 Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### **Program Specific Outcomes**

- **PSO1 Professional Skills:** Apply the knowledge of materials and manufacturing principles to plan, design and monitor the production operations of an Industry.
- **PSO2 Design Skills:** Employ the governing laws of Thermodynamics, Heat transfer and Refrigeration & Air Conditioning to design and develop Thermo Fluid systems.

**RG22** Regulations

| <ul> <li>On completion of this course, student will be able to</li> <li>Solving the system of linear equations, find the eigen values and eigenvectors and use this information to facilitate the calculation of matrix characteristics.</li> <li>Translate the given function as series of Taylor's and Maclaurin's with remainders, analyze the behavior of functions by using mean value theorems.</li> <li>Acquire the Knowledge maxima and minima functions of several variables. Utilize Jacobian of a coordinate transformation to deal with the problems in change of variables.</li> </ul> |   |                                   |   |                               |         |                    |  |  |

- Apply multiple integration techniques in evaluating areas and volumes bounded by the region.
- Understand beta and gamma functions and its relations, conclude the use of special function in evaluating definite integrals.

| Fischer-Tropsch's process; Gaseous fuels - composition and uses of natural gas, P                           | roducer gas   |
| and water gas.  |               |
| Unit–V Advanced Engineering Materials   | 10            |
| Composites: Definition, classification with examples and applications.                                      |               |
| Cement: Composition, Classification, preparation (Dry and Wet processes), S<br>Hardening of Portland cement | etting and    |
| Refractories: Classification, characteristics of good refractories, properties- Refr                        | actoriness.   |

refractoriness under load, porosity and chemical inertness – applications of refractories.

Lubricants: Classification of lubricants with examples-characteristics of a good lubricants - mechanism of lubrication (thick film, thin film and extreme pressure) - properties of lubricants: viscosity, cloud point, pour point, flash point and fire point and Aniline point.

## **Course Outcomes:**

On completion of this course, the students are able to:

- Recognize the basic properties of water and its significance in domestic and industrial purposes.(L2)
- Discuss the principles of electrochemistry in batteries.(L2)
- Discuss the knowledge of corrosion of metals and methods for its prevention towards the technological applications.(L2)
- Explain polymerization and the preparation, properties, and applications of thermoplastics & thermosetting, elastomers, & conducting polymers.(L1)
- Explain calorific values, octane number, refining of petroleum and cracking of oils and Select suitable fuels for IC engines. (L1)
- Describe the various engineering materials.(L1)

## **Text Books:**

- 1. Jain and Jain, Engineering Chemistry, 16/e, DhanpatRai, 2013.
- 2. Peter Atkins, Julio de Paula and James Keeler, Atkins' Physical Chemistry, 10/e, Oxford University Press, 2010.

## **Reference Books:**

- 1. Skoog and West G.V.Subba Reddy, K.N.Jayaveera and C. Ramachandraiah, Engineering Chemistry, McGraw Hill, 2020.
- 2. Douglas A. Skoog, Stanley R. Crouch, F. James Holler, Principles of Instrumental Analysis, 6/e, Thomson Books, 2007.
- 3. H.F.W. Taylor, Cement Chemistry, 2/e, Thomas Telford Publications, 1997.
- 4. D.J. Shaw, Introduction to Colloids and Surface Chemistry, Butterworth-Heineman,1992.

#### **Course Objectives:**

To introduce the concept of electrical circuits and its components. To introduce the characteristics of various electronic devices. To impart the knowledge of various configurations, characteristics and applications of electrical & electronic components.

- 1) To understand the basic principles of all semiconductor devices.
- 2) To be able to solve problems related to diode circuits, and amplifier circuits.
- 3) To analyze diode circuits, various biasing and small signal equivalent circuits of amplifiers.
- 4) To be able to compare the performance of BJTs and MOSFETs.
- 5) To design rectifier circuits and various amplifier circuits using BJTs and MOSFETs.

| Syllabus  |  | Total Hours:48         |  |  |  |  |
|---|--|------------------------|--|--|--|--|
| Unit - I  | Fundamentals   | 9 Hrs                  |  |  |  |  |

#### Digital Electronics & Micro processors :

**Digital Electronics**: Logic Gates, Simple combinational circuits–Half and Full Adders, BCD Adder.Latches and Flip-Flops (S-R, JK and D), Shift Registers and Counters **8085 Micro processor:** 8085 Micro processors architecture

Course Outcomes (CO):

#### On completion of this course, student will be able to

- Apply KCL, KVL and network theorems to analyse DC circuit.
- Analyze the single-phase AC Circuits, the representation of alternating quantities and determining the power and power factor in these circuits..
- Comprehend the construction and Operation of DC and AC machines.
- Understand the operation of PN Junction diode and its application in rectifier circuits.
- Compare the different configurations of BJT and draw the V-I characteristics of BJT, JFET and MOSFET..

## **Textbooks:**

- M.Surya Kalavathi, Ramana Pilla, Ch. Srinivasa Rao, Gulinindala Suresh, " Basic Electrical and Electronics Engineering", S.Chand and Company Limited, New Delhi, 1<sup>st</sup> Edition, 2017.
- **2.** R.L.Boylestad and Louis Nashlesky, "**Electronic Devices & Circuit Theory**", Pearson Education, 2007.

## **Reference Books:**

- b) Conical funnel
- c) Elbow pipe
- d) Brazing

# Fitting:

Familiarity with different types of tools used in fitting and do the following fitting exercises a)V-fit

- b) Dovetail fit
- c) Semi-circular fit
- d) Bicycle tire puncture and change of two wheeler tyre

## **Electrical Wiring:**

Familiarities with different types of basic electrical circuits and make the following connections

- a) Parallel and series
- b) Two-way switch
- c) Godown lighting
- d) Tube light
- e) Three phase motor
- f) Soldering of wires

# Course Outcomes (CO):

## On completion of this course, student will be able to

- Apply wood working skills in real world applications. (13)
- Build different objects with metal sheets in real world applications. (13)
- Apply fitting operations in various applications. (13)
- Apply different types of basic electric circuit connections. (13)
- Use soldering and brazing techniques. (I2)

Note: In each section a minimum of three exercises are to be carried out.

| Task 1: Lear  | n about Compu   | uter: Identify | y the internal parts  | of a computer, and    | l its peripherals. |  |  |
| Represent the   | same in the f   | form of diag   | grams including Bl    | ock diagram of a c    | computer. Write    |  |  |
| specifications  | for each part   | of a comput    | ter including periph  | nerals and specifica  | tion of Desktop    |  |  |
| computer. Sul   | omit it in the fo   | rm of a repo   | ort.                  |                       |                    |  |  |
| Task 2: Asser   | nbling a Comp   | outer: Disass  | emble and assemble    | e the PC back to wo   | rking condition.   |  |  |
| Students should be able to trouble shoot the computer and identify working and non-working      |   |                |                       |                       |                    |  |  |
| parts. Student  | parts. Student should identify the problem correctly by various methods |                |                       |                       |                    |  |  |
| Task 3: Insta   | ll Operating sy   | stem: Stude    | ent should install Li | inux on the comput    | er. Student may    |  |  |
| install another operating system (including proprietary software) and make the system dual      |   |                |                       |                       | the system dual    |  |  |
| boot or multi boot. Students should record the entire installation process.                     |   |                |                       |                       |                    |  |  |
| Task 4: Operating system features: Students should record the various features that are         |   |                |                       |                       |                    |  |  |
| supported by the operating system(s) installed. They have to submit a report on it. Students    |   |                |                       |                       |                    |  |  |
| should be able to access CD/DVD drives, write CD/DVDs, access pen drives, print files, etc.     |   |                |                       |                       |                    |  |  |
| Students should install new application software and record the installation process.           |   |                |                       |                       |                    |  |  |
| Networking and Internet   |   |                |                       |                       |                    |  |  |
| Task 5: Networking: Students should connect two computers directly using a cable or wireless    |   |                |                       |                       |                    |  |  |
| connectivity and share information. Students should connect two or more computers using         |   |                |                       |                       |                    |  |  |
| switch/hub and share information. Crimpling activity, logical configuration etc. should be done |   |                |                       |                       |                    |  |  |
| by the student. The entire process has to be documented.  |   |                |                       |                       |                    |  |  |
| Task 6: Browsing Internet: Student should access the Internet for Browsing. Students should     |   |                |                       |                       |                    |  |  |
| search the Internet for required information. Students should be able to create e-mail account  |   |                |                       |                       |                    |  |  |

and send email. They should get acquaintance with applications like Facebook, skype etc. If Intranet mailing facility is available in the organization, then students should share the information using it. If the operating system supports sending messages to multiple users (LINUX supports it) in the same network, then it should be done by the student. Students are expected to submit the information about different browsers available, their features, and search process using different natural languages, and creating email account.

**Task 7:** Antivirus: Students should download freely available Antivirus software, install it and use it to check for threats to the computer being used. Students should submit information about the features of the antivirus used, installation process, about virus definitions, virus engine etc. Productivity tools

**Task 8:** Word Processor: Students should be able to create documents using the word processor tool. Some of the tasks that are to be performed are inserting and deleting the characters, words and lines, Alignment of the lines, Inserting header and Footer, changing the font, changing the colour, including images and tables in the word file, making page setup, copy and paste block of text, images, tables, linking the images which are present in other directory, formatting paragraphs, spell checking, etc. Students should be able to prepare project cover pages, content sheet and chapter pages at the end of the task using the features studied. Students should submit a user manual of the word processor considered, Image Manipulation tools.

**Task 9:** Presentations: creating, opening, saving and running the presentations, selecting the style for slides, formatting the slides with different fonts, colours, creating charts and tables, inserting and deleting text, graphics and animations, bulleting and numbering, hyperlinking, running the slide show, setting the timing for slide show.

**Task 10:** Spreadsheet: Students should be able to create, open, save the application documents and format them as per the requirement. Some of the tasks that may be practiced are Managing the worksheet environment, creating cell data, inserting and deleting cell data, format cells, adjust the cell size, applying formulas and functions, preparing charts, sorting cells. Students should submit a user manual of the Spreadsheet

**Task 11:** LateX: Introduction to Latex and its installation and different IDEs. Creating first document using Latex, using content into sections using article and book class of LaTeX. Styling Pages: reviewing and customizing different paper sizes and formats. Formatting text (styles, size, alignment, colors and adding bullets and numbered items, inserting mathematical symbols, and images, etc.). Creating basic tables, adding simple and dashed borders, merging rows and columns. Referencing and Indexing: cross-referencing (refer to sections, table, images), bibliography (references).

## Course Outcomes (CO):

#### On completion of this course, student will be able to

- 1. Disassemble and Assemble a Personal Computer and prepare the computer ready to use.
- 2. Prepare the Documents using Word processors and Prepare spread sheets for calculations using excel and also the documents using LAteX.
- 3. Prepare Slide presentations using the presentation tool.
- 4. Interconnect two or more computers for information sharing.
- 5. Access the Internet and Browse it to obtain the required information.

#### **Reference Books:**

- 1. Introduction to Computers, Peter Norton, McGraw Hill
- 2. MOS study guide for word, Excel, Powerpoint& Outlook Exams, Joan Lambert, Joyce Cox, PHI.
- 3. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.
- 4. Networking your computers and devices, Rusen, PHI
- 5. Trouble shooting, Maintaining & Repairing PCs, Bigelows, TMH
- **6.** Lamport L. LATEX: a document preparation system: user's guide and reference manual. Addison-wesley; 1994.

Note: Use open source tools for implementation of the above exercises.

| Week I  |  |               |                         |                        |                    |  |  |
| Write C program   | ns that use b  | oth recursiv  | ve and non-recursive    | functions              |                    |  |  |
| i) To find the f  | factorial of a   | ı given integ | ger.                    |                        |                    |  |  |
| ii) To find the (   | GCD (greate  | est common    | divisor) of two giver   | n integers.            |                    |  |  |
| iii) To solve To  | wers of Han  | oi problem.   | , C                     | C                      |                    |  |  |
| Week 2  |  | 1             |                         |                        |                    |  |  |
| a) Write a C pr   | ogram to fir   | nd both the   | largest and smallest n  | number in a list of ir | ntegers.           |  |  |
| b) Write a C pr   | ogram that   | uses functio  | ns to perform the foll  | lowing:                | -                  |  |  |
| i) Addition of T  | wo Matrices  | s ii) Multipl | ication of Two Matri    | ces                    |                    |  |  |
| Week 3  |  | / <b>1</b>    |                         |                        |                    |  |  |
| a) Write a C program that uses functions to perform the following operations:               |  |               |                         |                        |                    |  |  |
| i) To insert a sub-string in to a given main string from a given position.                  |  |               |                         |                        |                    |  |  |
| ii) To delete n characters from a given position in a given string.                         |  |               |                         |                        |                    |  |  |
| Week 4  |  |               |                         |                        |                    |  |  |
| a) Write a C program that displays the position or index in the string S where the string T |  |               |                         |                        |                    |  |  |
| begins, or - 1 if S doesn't contain T.  |  |               |                         |                        |                    |  |  |
| b) Write a C pr   | ogram to co  | ount the line | s, words and characte   | ers in a given text.   |                    |  |  |
| Week 5  | -  |               |                         | -                      |                    |  |  |
| a) Write a C Pr   | ogram to pe  | erform vario  | us arithmetic operation | ons on pointer varia   | bles.              |  |  |
| b) Write a C Program to demonstrate the following parameter passing mechanisms:             |  |               |                         |                        |                    |  |  |
| i) call-by-value ii) call-by-reference  |  |               |                         |                        |                    |  |  |
| Week 6  |  |               |                         |                        |                    |  |  |
| Write a C program that uses functions to perform the following operations:                  |  |               |                         |                        |                    |  |  |
| i) Reading a complex number   |  |               |                         |                        |                    |  |  |
| ii) Writing a complex number  |  |               |                         |                        |                    |  |  |
| iii) Addition of  | two comple   | x numbers     |                         |                        |                    |  |  |

iv) Multiplication of two complex numbers

(Note: represent complex number using a structure.)

Week 7

Write C programs that implement stack (its operations) using

- i) Arrays
- ii) Pointers

# Week 8

Write C programs that implement Queue (its operations) using

i) Arrays

ii) Pointers

# Week 9

Write a C program that uses Stack operations to perform the following:

i) Converting infix expression into postfix expression

ii) Evaluating the postfix expression

# Week 10

Write a C program that uses functions to perform the following operations on singly linked list.

i) Creation ii) Insertion iii) Deletion iv) Traversal

# Week 11

Write a C program that uses functions to perform the following operations on Doubly linkedlist.

i) Creation ii) Insertion iii) Deletion iv) Traversal

# Week 12

Write a C program that uses functions to perform the following operations on circular linkedlist.

i) Creation ii) Insertion iii) Deletion iv) Traversal

# Week 13

Write a C program that uses functions to perform the following:

i) Creating a Binary Tree of integers

ii) Traversing the above binary tree in preorder, inorder and postorder.

# Week 14

Write C programs that use both recursive and non-recursive functions to perform the following

searching operations for a key value in a given list of integers:

i) Linear search

ii) Binary search

# Week 15

Write a C program that implements the following sorting methods to sort a given list of integers in

ascending order

- i) Bubble sort
- ii) Selection sort
- iii) Insertion sort

## Course Outcomes (CO):

#### On completion of this course, student will be able to

- Demonstrate basic concepts of C programming language. (L2)
- Develop C programs using functions, arrays, structures and pointers. (L6)
- Illustrate the concepts Stacks and Queues. (L2)
- Design operations on Linked lists. (L6)
- Apply various Binary tree traversal techniques. (L3)
- Develop searching and sorting methods. (L6)

10. Input and Output characteristics of BJT with CE configuration

11. Input and Output characteristics of BJT with CB configuration

12. Input and Output Characteristics of JFET.

## Course Outcomes (CO):

## On completion of this course, student will be able to

- Experimentally verify the basic circuit theorems, KCL and KVL
- Measure power, power factor and phase angle in RL&RC circuits experimentally.
- Acquire hands on experience of conducting various tests on dc shunt motor, single phase transformers and three phase induction motors and obtaining their performance indices using standard analytical as well as graphical methods
- Draw the characteristics of different semiconductor devices like PN junction Diode, Zener Diode, BJT and JFET by conducting suitable experiments.
- Experimentally verify the working of half and full wave rectifier by using PN Junction diodes
